

GANGADHAR MEHER UNIVERSITY
AMRUTA VIHAR ,SAMBALPUR,ODISHA

Syllabus for

MASTER OF COMPUTER APPLICATIONS

(2-Year Programme)

Course Effective from Academic Year 2021-2022

DEPARTMENT OF MCA

PROGRAM OUTCOMES(POs):

- PO1. Knowledge and Understanding:** Develop an ability to understand the theoretical foundations of computer science for designing efficient methodologies along with the knowledge of limitations of computing.
- PO2. General, Technical and Professional Skills:** An ability to function effectively as an individual with diversified skills or as a part of a multi-disciplinary team setting to accomplish defined goals.
- PO3. Application of Knowledge and Skills:** Developing problem analysis skills and knowledge and applying the same in real life situation.
- PO4. Research Skills:** Explore research based knowledge and carry out academic investigations on the cutting edge technologies in allied subjects of Computer Science.
- PO5. General Learning Outcomes:** Create, select and apply advanced techniques and tools including modelling complex activities related to Computer Science.
- PO6. Constitutional, Humanistic, Ethical and Moral Values:** Design, develop and evaluate new system components or processes of computer science that meet the desired needs with appropriate considerations of industry, society, public health, safety, culture, environment and sustainable development sticking on to the ethics and values.
- PO7: Employability Job Skills and Entrepreneur Skills:** Prepare the students to take up a career as versatile contributors in industry, academia, research and development or entrepreneurship employing their expertise to advance personal growth while making meaningful contributions to societal progress

PROGRAM SPECIFIC OUTCOMES(PSOs):

- PSO1.** To shield students from the rapid obsolescence of computer technology, the program focuses on imparting foundational knowledge, fostering critical thinking skills, and cultivating technical expertise.
- PSO2.** Analyze, design, and develop software applications with latest computing tools and technologies.
- PSO3.** Empowering the students to pursue careers in IT industry/ consultancy/ research and development, teaching and allied areas related to computer science.

MCA Programme Structure

Year	Semesters	
First Year	Semester I	Semester II
Second Year	Semester III	Semester IV

Part-I: Semester-I

Papers		Marks		Total Marks	Duration (Hrs)	Credit
Paper No	Title	Mid Term	End Term			
MCA101	Programming and Data Structure	20	80	100	4	4
MCA102	Data Communication & Networks	20	80	100	4	4
MCA103	Operating Systems	20	80	100	4	4
MCA104	Computer Based Numerical Methods	20	80	100	4	4
MCA105	Lab (Problem Solving and Data Structures using C)			100	4	4
Total				500		20

Part-I: Semester-II

Papers		Marks		Total Marks	Duration (Hrs)	Credit
Paper No	Title	Mid Term	End Term			
MCA201	Object Oriented Programming using JAVA	20	80	100	4	4
MCA202	Design and Analysis of Algorithms	20	80	100	4	4
MCA203	Database Management Systems	20	80	100	4	4
MCA204	Theory of Computation	20	80	100	4	4
MCA205	Lab (Java and Database)			100	4	4
DSE Papers						
MCA206 A	Data Warehousing and Mining	20	80	100	4	4
MCA206 B	Wireless Sensor Networks	20	80	100	4	4
MCA206 C	Internet of Things	20	80	100	4	4
MCA206D	Mobile Computing	20	80	100	4	4
Total				600		24

Part-II: Semester-III

Papers		Marks		Total Marks	Duration (Hrs)	Credit
Paper No	Title	Mid Term	End Term			
MCA301	Information Security	20	80	100	4	4
MCA302	Computer Architecture	20	80	100	4	4

Semester-I

Course Name: PROGRAMMING AND DATA STRUCTURE

Category: Programme Core Course

Prerequisite: Computer fundamental

Learning Objective:

- To understand the various steps in Program development.
- To understand the basic concepts in C Programming Language.
- To learn how to write modular and readable C Programs
- To learn to write programs (using structured programming approach) in C to solve problems.
- Familiar with basic data structure of algorithms

Learning Outcome:

- To make the student understand simple sorting and searching methods.
- This course enables us to understand the concepts of Data structure and also ability to apply solving and logical skills to programming in C language and also in other languages.

Paper-MCA101	
Programming and Data Structure	
UNIT-I:	12hrs
Review of C programming, Control structures: conditional and looping statements, Arrays, Multi-dimensional arrays, Structures, Functions, Recursive functions, use of pointers, Dynamic memory allocation using malloc() and calloc()	
UNIT-II:	10hrs
Linear data structures and their sequential storage representation, Stack, Queues, Circular Queues and Dequeues, Operations on these data structures, Applications of Stack and Queue, Priority Queue. Linear data structures and their linked representation: Singly linked, Circularly linked and doubly linked lists, insertion and deletion operations on these data structures, Representation of sparse matrix using linked list	
UNIT-III:	8hrs
Non-linear data structures: Binary tree representation, Tree traversal: Inorder, Preorder, Postorder (recursive and non-recursive algorithms), Conversion of general tree to Binary tree, Binary search tree, Representations of graph: adjacency matrix, adjacency list, multi list, Graph traversal: Depth first and Breadth first	
UNIT-IV:	10hrs
Performance analysis of Searching techniques such as Sequential and Binary search. Performance analysis of Sorting techniques such as Insertion, Selection, Bubble, Quick, Radix, Merge, and Heap sort. Representation of B-tree and AVL tree, creation, insertion and deletion operations on these trees,	

Text Books:
<ol style="list-style-type: none"> 1. E. Balagurusamy, Programming in ANSI C, McGraw-Hill, 2012. 2. A. M. Tanenbaum, Data Structure using C, Pearson Education India, 1990. 3. An Introduction to data structures with applications, J. P. Tremblay and P. G. Sorenson, McGraw Hill. 4. Fundamentals of Data Structures in C - Horowitz, Sahni, Anderson-Freed, Universities Press
Reference Books:
<ol style="list-style-type: none"> 1. B. Kernighan and D. Ritchie, The C Programming Language, prentice-Hall, 1988 2. A. K. Rath and A. K. Jagadev, Data Structures Using C, Second Edition. 3. Data Structures using C - ReemaThareja, Oxford University Press

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Explain Linear data structure and their Linked Representation.
CO2	Perform operation on tree data structure and their operation,
CO3	Analyse performance of different Sorting Techniques.
CO4	Explain and represent B tree and AVL tree along with their operations.
CO5	Use both Linear and Nonlinear Data structure in Real time Application through Coding.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	1	3	3	2		1	1		
CO2	1	2	3	3	2		1	2	1	1
CO3	1	2	3	2	2		1	1	1	1
CO4	1	3	3	3	2		2	3	2	1
CO5	2	2	3	3	2		2	2	1	1

Course Name: DATA COMMUNICATION & NETWORKS

Category: Programme Core Course

Prerequisite: Basics of Computer

Learning Objective:

- The objective of the course is to provide an overview of communication network functions and a good foundation for further studies in the subject. It involves understanding and application of design principles and methods for systems development and review of the underlying systems, and communications technologies and significant standardized systems.

Learning Outcome:

- Understand and be able to explain the principles of layered protocol architecture; be able to identify and describe the system functions in the correct protocol layer and further describe how the layers interact.

Paper-MCA102	
Data Communication & Networks	
UNIT-I:	10hrs
Overview of Data Communications and Networking. Physical Layer: Analog and Digital, Analog Signals, Digital Signals, Analog versus Digital, Data Rate Limits, Transmission Impairment, More about signals. Digital Transmission: Line coding, Block coding, Sampling, Transmission mode. Analog Transmission: Modulation of Digital Data; Telephone modems, modulation of Analog signals. Multiplexing: FDM , WDM , TDM , Transmission Media: Guided Media, Unguided media (wireless) Circuit switching and Telephone Network: Circuit switching, Telephone network.	
UNIT-II:	12hrs
Data Link Layer: Error Detection and correction: Types of Errors, Detection, Error Correction Data Link Control and Protocols: Flow and Error Control, Stop-and-wait ARQ. Go-Back-N ARQ, Selective Repeat ARQ, HDLC, Point –to- Point Protocol, Multiple Access, Random Access, Controlled Access, Channelization. Local area Network: Ethernet, Traditional Ethernet, Fast Ethernet, Gigabit Ethernet. Wireless LANs: IEEE 802.11, Bluetooth virtual circuits: Frame Relay and ATM.	
UNIT-III:	10hrs
Network Layer: Host to Host Delivery: Internetworking, addressing, Routing. Network Layer Protocols: ARP, RARP, NAT, BOOTP, DHCP, IPV4, ICMP, IPV6, ICMPV6 and Unicast routing protocols Transport Layer: Process to Process Delivery: UDP, TCP, congestion control and Quality of service.	
UNIT-IV:	8hrs
Application Layer: Client Server Model, Peer to peer network, Domain Name System (DNS): Electronic Mail (SMTP) and file transfer (FTP) HTTP and WWW.	
Text Books:	
1. B. A. Forouzan, Data Communications and Networking , 4 th Edition, Tata McGraw-Hill 2007.	
Reference Books:	
1. Computer Networks -A S Tenenbaum (PHI)	
2. Computer Networking: A Top-Down Approach Featuring the Internet, 3/e - James F. Kurose	

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Identify the networks with their related concepts.
CO2	Memorize the protocols at different layers of the network.
CO3	Compare the same concepts with different dimension.
CO4	Practice the numerical problems of the related concept.
CO5	Explain the signals with their differences.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	2	3	2	1	2	2	1	3	1
CO2	1	3	3	3	1	2	1	2	2	1
CO3	1	2	3	2	1	2	2	1	2	1
CO4	1	2	3	3	1	1	2	1	2	1
CO5	1	2	3	2	1	1	2	2	1	1

OPERATING SYSTEMS

Course Name:

Category:

Programme Core Course

Prerequisite:

- Computer Programming and Data Structures
- Computer Organization and Architecture

Learning Objective:

- Provide an introduction to operating system concepts (i.e., processes, threads, scheduling, synchronization, deadlocks, memory management, file and I/O subsystems and protection)
- Introduce the issues to be considered in the design and development of operating system

Learning Outcome

- To master the concepts of a process and how the processes are scheduled and synchronized.
- To develop the understanding of detecting a deadlock situation and be able to recovery from it.
- To understand the different approaches to memory management and disk management.
- To understand the structure and organization of the file systems and I/O systems

Paper-MCA103	
Operating Systems	
UNIT-I:	10hrs
Operating System Overview: -Introduction, The Need of Operating Systems, Evolution of Operating Systems, Types of Operating Systems, Simple Batch, Multiprogrammed, Time-shared, Personal Computer, Parallel, Distributed Systems, Real-Time Systems, System components, Operating System services, System Calls, Virtual Machines, System Design and Implementation. Process Management – Process concepts, Life cycle, PCB, Schedulers, Process Scheduling, Threads, Scheduling Levels, CPU Scheduling: Scheduling-Criteria, Algorithms, Algorithm Evaluation.	
UNIT-II:	10hrs
Concurrency: -Process synchronization, The Critical- Section Problem, Peterson's Solution, synchronization Hardware, Semaphores, Classic problems of synchronization, Monitors. Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock detection, deadlock prevention, deadlock avoidance, Recovery from deadlock.	
UNIT-III:	10hrs
Memory Management: Main Memory, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table.	

Virtual Memory: Demand Paging, Page Replacement, Allocation of Frames, Thrashing, Memory-Mapped Files
UNIT-IV: 10hrs
Mass-Storage Structure: Overview, Disk Structure, Disk scheduling, disk management, Swap-space management, RAID structure. File Systems: File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, Protection. File- System Structure and Implementation, Directory Implementation, Allocation Methods, Free-Space Management.
Text Book:
1. A. Silberchatz, P. B. Galvin, G. Gagne, Operating System Concepts , 7th Edition, John Wiley, 2003.
Reference Books:
1. Charles Crowley, Operating systems : a design-oriented approach , McGraw-Hill, 1996. 2. A. S. Tanenbaum and H. Bos, Modern Operating Systems , Pearson, 2015. 3. W. Stallings, Operating Systems – Internals and Design Principles , Prentice Hall, 2009. 4. D. M. Dhandhere, Operating Systems-A Concept Based Approach , McGraw-Hill, 2006.

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Explain the different types of Operating systems
CO2	Describe the lifecycle of a process and its attributes with its scheduling algorithms
CO3	Analyze the concept of Deadlock
CO4	Apply segmentation and paging techniques
CO5	Explain the structure and organization of the file systems and I/O systems

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1			1	1		1	1		
CO2	2	2	3	3	1		2	2	2	1
CO3	1	2	3	2	2		1	2	1	1
CO4	1	2	3	3			2	1		1
CO5	1	3	3	3	1		1	2	2	1

Course Name: **Computer Based Numerical Methods**

Category: Programme Core course

Prerequisite: A good knowledge of number systems, calculus and matrices.

Learning Objective:

- aware of different error calculations in numerical computations, Polynomial interpolation, Numerical differentiation and Integration.
- know Numerical solution of differential equations and system of linear equations.
- study concept of Eigen vectors & Eigen values of matrices.

Learning Outcome:

- Understand the concepts of error in numerical computations, its control and methods of root finding.
- Acquire numerical skills and concepts of computation of matrix inverse and solution of linear systems.
- Understand and apply the concepts of interpolation for approximating functions.
- Perform differentiation and integration using various numerical methods.
- Study and use the eigen values and eigen vectors of matrices, its properties and applications.

Paper-MCA104	
Computer Based Numerical Methods	
UNIT-I:	10hrs
Fixed point arithmetic, rounding error, truncation error, loss of significance and error propagation and stability, computational methods for error estimation, convergence of sequences, some mathematical preliminaries.	
UNIT-II:	10hrs
Roots of $f(x)$ by bisection method, method of false position, secant method, Newton-Raphson methods, fixed point iteration method. Solution of $Ax = b$: Solution of simultaneous linear equations by Cramer's rule, Gauss' elimination method, Gauss-Jordan method, Gauss-Seidel method, matrix inversion by Gauss-Jordan method. Curve Fitting: Least square approximation of functions by linear regression, polynomial regression..	

UNIT-III:	10hrs
Numerical differentiation and integration: Differentiation formulae, integration by trapezoidal rule, Simpson's 1/3 rule and 3/8 rule. Numerical solution of Ordinary Differential Equation: Euler's method, modifications of Euler's, Runge-Kulta methods of the third and fourth order, Predictor-corrector methods.	
UNIT-IV:	10hrs
Miscellaneous topics: Determination of eigen values and eigen vectors of a matrix by iteration, Inverse of a matrix.	
Text Book:	
1. S.C. Chopra and R.P. Canole, Numerical Methods for Engineers, McGraw-Hill, 2010.	
Reference Book:	
1. S.D. Conte and C. De Boor, Elementary Numerical Analysis: an algorithmic approach, SIAM, 2017.	

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Able to use logical notation to define and reason about fundamental mathematical concepts such as sets, relations, and functions.
CO2	To apply mathematical foundations, algorithmic principles, and computer science theory to the modelling and design of computer based systems.
CO3	Able to construct simple mathematical proofs and possess the ability to verify them.
CO4	Model problems in Computer Science using Numerical differentiation and integration.
CO5	To Understand and prove fundamental results and solve algebraic problems using appropriate techniques

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	1	1	1	1		1	1		2
CO2	1	2	1	1	1		1	1		1
CO3	1	2	1	1	1		1	2	1	1
CO4	2	3	1	2	2		2	2	1	1
CO5	2	2	1	2	1		1	2	1	1

Paper-MCA105

Lab :Problem Solving and Data Structures using C

LAB PROGRAMS ON C:

1. Simple Programs using C :Find Area, Perimeter of Square & Rectangle, Find max. Among 3 nos, Check leap year
2. Programs using Loop :Factorial of Number, Prime Number, Perfect Number, Armstrong Number, Floyd's Triangle
3. Function Programs : Simple Function Problems, Function with call by reference, Recursion function e.g. sum of digit, reverse of digit, Fibonacci Series, Inter conversion of Decimal, Binary & Hexadecimal no, LCM & GCD of numbers
4. Array & Structure Operations: Insert & Delete an element at given location in array, Transpose of matrices, Multiplication of matrices, Display upper & lower diagonal of matrices
Array of Structure e.g. student result, Employee pay slip , Phone bill

DATA STRUCTURE PROGRAMS:

1. Implementation of sparse matrix
2. Implementation of linear search, binary search, bubble sort, insertion sort, selection sort
3. Implementation of single linked list and its operations
4. Design a doubly linked list to hold strings and use it for organizing a sequence of cities
5. Repeat Q4 using doubly circular linked list
6. Create a polynomial using single linked list and perform addition operation of two polynomials
7. Implement a stack,use stack for conversion of infix to postfix and evaluation of postfix expression.
8. Implementation of circular queue (using array) with menu options like insert, delete,display and exit.
9. Implementation of a priority queue and use it to organize studentrecords prioritized by marks.
10. Recursive implementation of quick sort and merge sort. Generate 10 random integers in a given range and apply sorting mechanisms.
11. Implement linear search and binary search to find out whether a given element is present or not in the array. Compare two search mechanisms based on number of comparisons required for a successful as well as unsuccessful search.
12. Implementation of a binary search tree with menu options: Construct a tree, insertanode, delete anode, traverse and display preorder, in order and post order sequenceof its nodes.
13. Implementation of Heap Sort.
14. Implementation of digraphs using adjacency matrix and find the transitive closureusingWarshall's algorithm.
15. Implementation of a weighted graph and find minimal cost spanning tree usingPrim's algorithm.

Semester-II

Course Name: OBJECT ORIENTED PROGRAMMING USING JAVA

Category: Programme Core Course

Prerequisite: Basic procedural programming Language (like C-Programming)

Learning Objective:

- Introduces object oriented programming concepts using the Java language.
- Introduces the principles of inheritance and polymorphism; and demonstrates how they relate to the design of abstract classes.
- Introduces the implementation of packages and interfaces.
- Introduces exception handling, event handling and multithreading.
- Introduces the design of Graphical User Interface using applets and swings.

Paper-MCA201	
Object Oriented Programming using JAVA	
UNIT-I:	8hrs
Java Evolution and Environment: Java evolution, overview of java language, java history, features of java, how java differs from C and C++, java and World Wide Web, web browser. Java Environment: Java Development Kit(JDK), Application Programming Interface(API), java programming structure, java tokens, constants, variables, expressions, decision making statements and looping, java statements, overview of arrays and strings, machine neutral, Java Virtual Machine(JVM), Command Line Arguments.	
UNIT-II:	12 hrs
Classes, Objects and Methods: Introduction, defining a class, creating objects, accessing class members, constructors, method overloading, static members. Inheritance: Defining a sub-class, sub-class constructor, multi-level variables, final classes and finalize methods, abstract methods and classes, visibility control. Arrays and Strings: One-dimensional arrays, creating an array, declaration of arrays, initialization of arrays, two-dimensional arrays, string arrays, string methods, string buffer class, vectors, wrapper classes, Basic I/O Streams: Scanner, buffered reader, Collection classes. Managing Errors and Exceptions: Introduction, types of errors: compile time and run-time errors, exceptions, types of exceptions, syntax of exception handling code, multiple catch statements, using finally statement, throwing our own exceptions.	
UNIT-III:	10hrs
Interfaces, Package and Multi-threaded Programming: Introduction, defining interfaces, extended interfaces, implementing interfaces. Package: Creation, importing a package and user-defined package. Threads: Introduction to threads, creating threads, extending the thread class, implementing the 'runnable' interface, life-cycle of a thread, priority of a thread, synchronization, and deadlock.	
UNIT-IV:	10hrs
Applet programming: Introduction, how applets differ from applications, building applet code, applet life cycle, about HTML, designing a web page, passing parameters to applets, getting	

input from the user.**Graphics Programming:** Introduction, abstract window toolkit class hierarchy, frames, event-driven programming, layout managers, panels, canvases, drawing geometric figures.**Introduction to Swings:** Introduction to Swings, overview of Swing components: JButton, JCheckBox, JRadioButton, JLabel, JTextField, JTextArea, JList.

Text Book:

1. H. Schildt, **The Java Complete References**, 9th Edition, Tata McGraw Hill, 2014.

Reference Books:

1. Y.Daniel Liang, **An Introduction to JAVA Programming**, Tata McGraw Hill, 2009.
2. K. Sierra, **Head First java**, 2nd Edition, Shroff Publishers, 2012.
3. 3. E. Balaguruswamy, **Programming with JAVA**, 2/e, Tata McGraw Hill

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to:-
CO1	Explain the basic principles of object-oriented programming along with its strength and weakness
CO2	Identify Java standard libraries and classes.
CO3	Apply the object-oriented programming techniques in developing small to medium-sized application programs and use it in real life applications.
CO4	Identify Java code utilities in applets, Java packages, and classes.
CO5	Design simple Graphical User Interface applications and use it in real world scenario.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	2		3	2	3		3	2	1	1
CO2	3	1	3	3		1	2	2	2	3
CO3	3	3	3	3	2	2	3	3	3	3
CO4	2	2	3	3	2	2	3	3	3	3
CO5	3	2	3	3	2	1	2	3	3	3

Course Name: **DESIGN AND ANALYSIS OF ALGORITHMS**

Category: Programme Core Course

Prerequisite: Data Structure

Learning Objective:

- Learn the algorithm analysis techniques.

- Become familiar with the different algorithm design techniques.
- Understand the limitations of Algorithm power.

Paper-MCA202	
Design and Analysis of Algorithms	
UNIT-I:	10hrs
Introduction to Design and analysis of algorithms, Growth of Functions (Asymptotic notations), Recurrences, Solution of Recurrences by substitution, Recursion tree method, Master Method, Analysis of Searching and Sorting Techniques: Brute Force Technique, Selection sort, Bubble sort.	
UNIT-II:	10hrs
Divide and Conquer: Merge sort, Quick sort, Time complexity analysis for Merge and Quick sort. Transform and Conquer: Balanced search tree, Heaps and Heap sort. Dynamic Programming algorithms: Matrix Chain Multiplication, Elements of Dynamic Programming, Longest Common Subsequence, 0/1 Knapsack problem.	
UNIT-III:	10hrs
Greedy Algorithms: Activity Selection Problem, Elements of Greedy Strategy, Fractional Knapsack Problem, Huffman Codes. Graph Algorithm - BFS and DFS, Minimum Spanning Trees, Kruskal algorithm, Prim's Algorithm, Single Source Shortest paths, Bellmen Ford Algorithm, Dijkstra's Algorithm.	
UNIT-IV:	10hrs
String matching, Rabin-Karp Algorithm, KMP Algorithms. Theory of NP-completeness: Complexity classes of P, NP, NP-Hard, NP complete. Polynomial reduction, Cook's theorem, discussion on SAT, CNF-SAT, Min vertex cover, max clique, Graph coloring.	
Text Book:	
1. T.H.Coreman et.al. Introduction to Algorithms ,MIT press Cambridge, 2001.	
Reference Books:	
1.M. R. Kabat, Design and Analysis of Algorithms , PHI, 2013. 2. S. Sridhar, Design and Analysis of Algorithms , Oxford University Press 3. E. Horowitz, S. Sahni, Fundamentals of Computer Algorithms , computer science press, 1978.	

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to
CO1	Describe asymptotic notation, its properties and use it in measuring algorithm behaviour
CO2	Apply mathematical principles in analysis of algorithms to solve real world problems
CO3	Analyze and apply the complexities of various algorithms and select the best one
CO4	Know the different strategies that are known to be useful in finding efficient algorithms to solve problems and to be able to apply them in real scenario
CO5	Choose appropriate data structures and algorithms and use it to design algorithms for a specific problem

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	3	2		2	3	2	1	3	3	3
CO2	2	2	3	2	3	2	1	2	2	2
CO3	2	2	3	3	2	1	2	3	3	3
CO4	2	3	3	3	2	3	2	2	2	3
CO5	2	3	2	3	2	3	2	3	3	3

Course Name: **DATABASE MANAGEMENT SYSTEMS**
Category: Programme Core Course
Prerequisite: **Basic Knowledge of Computer Programming and Data structures**

- Learning Objective:**
- Classify modern and futuristic database applications based on size and complexity
 - Design a database from understanding an Universe of Discourse, using ER diagrams; map ER model into Relational model and to normalize the relations.
 - Create a physical database from a design using DDL statements with appropriate key, domain and referential integrity constraints; analyze different ways of writing a query and justify which is the effective and efficient way; and compare and contrast various indexing strategies in different database systems and list key challenges in advanced database systems and to critique how they differ from traditional database systems.

Learning Outcomes	<ul style="list-style-type: none"> • To study the concepts of databases especially Relational Database design and query languages.
Paper-MCA203	
Database Management Systems	
UNIT-I:	10hrs
<p>Introduction to DBMS: Characteristics, Purpose, Application of the Database approach, Advantages of using DBMS approach upon file structure, Three-schema Architecture, Data Abstraction, Data Independence, Data base languages, DBMS Architecture, Data Models overview, Introduction to ER model and Relational data model.</p> <p>Relational Query Language: Relational algebra, Tuple and Domain Relational Calculus, SQL.</p>	
UNIT-II:	10hrs
<p>Database Design and ER model: Overview of Design Process, Entities, Attributes, Constraints, Weak Entities, ER diagram, Extended ER Features, Reduction to Relational Schemas.</p> <p>Relational Database Design: Feature of Good Relational Design, Atomic Domain and First Normal Form, Functional Dependency Theory, Decomposition of Schemas, Properties of Relational Decompositions, Normal forms and Normalization, 2NF, 3NF, BCNF, Multivalued Dependencies & 4NF. Performance tuning and Denormalization</p>	
UNIT-III:	10hrs
<p>Query Processing and Optimization: Evaluation of Relational Algebra Expression, QueryEquivalence, Join strategy, Query optimization algorithms. Storage Strategies: Indices, B+Trees, Hashing</p>	
UNIT-IV:	10hrs
<p>Transaction Processing: Transaction Concept, ACID Properties of Transaction, Serializability, Recoverability.</p> <p>Concurrency Control: Overview, Lock-based Protocol, Timestamp ordering protocol, Multi version and Optimistic concurrency control techniques.</p> <p>Recovery Systems: Database Failure and Recovery, Log based Recovery to preserve Atomicity and Durability</p>	

Text Book:
1. A. Silberschatz, F. H. Korth, Database System Concepts , 6th Edition, MGH, 2010.
Reference Books:
1. R. Elmasri, Fundamental of Database Systems, Pearson Education, 2008. 2. B. Desai, An Introduction to Database System, Galgotia publication. 3. C.J. Date, An Introduction to Database Systems, Pearson Education

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to
CO1	Define the basics of databases, database management systems, architecture of database systems, and the role of database users. Explain effectively the features of database management systems and data models.
CO2	Construct formal queries using relational algebra and relational calculus and structured query languages to perform database operations.
CO3	Identify the attributes to code a real world entity and create E-R models for designing databases for real-world applications. Examine the database design to check for improvement using normalization.
CO4	Describe various indexing techniques and explain the basics of query evaluation mechanisms.
CO5	Recognize the state of a database instance. Apply concurrency control and recovery mechanisms to maintain the correctness and consistency in the database.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

Course Name:	THEORY OF COMPUTATION
Category:	Programme Core Course
Prerequisite:	Fundamental of computer science and mathematics
Learning Objective:	<ul style="list-style-type: none"> To introduce concepts in automata theory and theory of computation. To identify different formal language classes and their relationships. To design grammars and recognizers for different formal languages.
Learning Outcome:	<ul style="list-style-type: none"> This course enables us to understand the concepts of theory of Computation and its applications.

Paper-MCA204	
Theory of Computation	
UNIT-I:	10hrs
Introduction: Automata theory, Computability theory, Complexity theory, Mathematical notations & terminology, Alphabet, String, Languages & operations on strings; Finite Automata (Deterministic): Formal definition, Transition function, Extended transition function, Language of DFA, Design of DFA; Finite Automata (Non-deterministic): Formal definition, Language of NFA, Equivalence of DFA & NFA; NFA with Epsilon Transition: Eliminating ϵ -transitions from NFA, Conversion from Epsilon-NFA to DFA, Minimization of DFA.	
UNIT-II:	10hrs
Moore machines, Mealy machines; Regular expressions: Regular operators and their precedence, Building regular expressions, DFA to Regular expressions, Regular expressions to DFA, Arden's theorem, Pumping Lemma for Regular languages, Closure properties of Regular languages.	
UNIT-III:	10hrs
Introduction to Grammars: Definition, Derivation of string, Left and right linear grammars, Regular grammars; Context Free Grammars (CFG): Definition, Derivation of string, Language of CFG, Parse Tree, Ambiguity in grammar, Elimination of ambiguity, Normal forms of CFG: Chomsky and Greibach normal forms, Converting CFG to CNF & GNF, Closure properties of context free languages (CFL).	
UNIT-IV:	10hrs
Push Down Automata (PDA): PDA Components, Moves of a PDA, Design of a PDA, PDA to CFG and CFG to PDA conversion, Pumping lemma for CFL; Turing Machines (TM): Design of a TM, Variation of TM, Recursively Enumerable Languages and undecidable problems. Church Turing hypothesis, Recursive and recursively enumerable sets, Chomsky's hierarchy of languages. Ackermann's function, Godel numbering; NP Completeness: P and NP, NP complete and NP Hard problems.	
Text Books:	
<ol style="list-style-type: none"> J. E. Hopcroft, R. Motwani, and J. D. Ullman, Introduction to Automata Theory, Languages and Computation, 3rd Edition, Pearson Education, 2007. P. Linz, An Introduction to Formal Languages and Automata, 4th Edition, Jones & Bartlett Learning, 2006. 	

Reference Books:

1. M. Sipser, **Introduction to the Theory of Computation**, 3rd Edition, Cengage Learning, 2012.
2. J. C. Martin, **Introduction to Languages and the Theory of Computation**, 4th Edition, Tata McGraw-Hill, 2010.
3. K. L. P. Mishra, and N. Chandrasekaran, **Theory of Computer Science: Automata, Languages and Computation**, 3rd Edition, PHI, 2012.

COURSE OUTCOMES:

After completion of this course successfully, the students will be able to-

CO1	Develop and implement mathematical models with DFA, NFA for regular languages.
CO2	Design regular expression for regular sets.
CO3	Design and implement grammar and PDA for context free languages and demonstrate their properties. Construct Turing machines for context sensitive and un-restricted languages.
CO4	Describe the Chomsky hierarchy of Formal Languages and Grammar.
CO5	Explain the concept of decidability & recursive enumerability, and classify a given language to the P, NP or NPC complexity classes.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

Lab: Java and Database

EXPERIMENTS ON JAVA

1. Programs to illustrate class and objects
2. Programs to illustrate Overloading & Overriding methods in Java
3. Programs on Constructors
4. Programs Illustrate the Implementation of Various forms of Inheritance. (Ex. Single, Hierarchical, Multilevel inheritance....)
5. Program which illustrates the implementation of multiple Inheritance using interfaces in Java.
6. Program to illustrate the implementation of abstract class.
7. Programs to illustrate Exception handling
8. Programs to create packages in Java.
9. Program to Create Multiple Threads in Java.
10. Program to Implement Producer/Consumer problem using synchronization
11. Developing a simple paint like program using applet
12. Developing programs onJButtons,JTextBox,JTextButtonetc

EXPERIMENTS ON DBMS:

1. Creation of a tables using create command and writing SQL queries to retrieve information from the tables.
2. Implement data definition languages (Create, Alter, Drop, Truncate, and Rename) &data manipulation languages (Insert, Update, and Delete) for updating and viewing records.
3. Implement SELECT command with different clauses (where clause, having clause, group by clause, order by clause).
4. Implement Single Row function (character, numeric, data functions).
5. To implement Group function (AVG, MIN, MAX, SUM).
6. Implement various types of integrity constraints (NOT NULL Constraint, DEFAULT Constraint, UNIQUE Constraint, PRIMARY Key, FOREIGN Key, CHECK Constraint).
7. Creation of Views, Synonyms, Sequence, Indexes, Save point.
8. Creating relationship between tables.
9. Implementation of PL/SQL block.
10. Write a PL/SQL block to satisfy some conditions by accepting input from theuser.
11. Write a PL/SQL block that handles all types of exceptions.

Course Name:	DATA WAREHOUSING AND MINING
Category:	Programme Elective Course
Prerequisite:	Data Structure and Algorithm, Linear Algebra, Basics of Web programming
Learning Objective:	This course deals with evolving multidimensional intelligent model from a typical system, representation of multi dimensional data for a data warehouse, discovering the knowledge imbibed in the high dimensional system, finding the hidden interesting patterns in data, and gives the idea to evaluate various mining techniques on complex data objects.
Learning Outcome:	This course enables us to understand the concepts of Data Mining and its applications.

DSE Paper – MCA206A	
Data Warehousing and Mining	
UNIT-I:	10hrs
Evolution of Decision Support Systems- Data warehousing Components –Building a Data warehouse, Data Warehouse and DBMS, Data marts, Metadata, Multidimensional data model, OLAP vs OLTP, OLAP operations, Data cubes, Schemas for Multidimensional Database: Stars, Snowflkes and Fact constellations.	
UNIT-II:	10hrs
Types of OLAP servers, 3–Tier data warehouse architecture, distributed and virtual data warehouses. Data warehouse implementation, tuning and testing of data warehouse. Data Staging (ETL) Design and Development, data warehouse visualization, Data Warehouse Deployment, Maintenance, Growth, Business Intelligence Overview- Data Warehousing and Business Intelligence Trends - Business Applications.	
UNIT-III:	10hrs
Data mining-KDD versus datamining, Stages of the Data Mining Process-task primitives, Data Mining Techniques -Data mining knowledge representation – Data mining query languages, Integration of a Data Mining System with a Data Warehouse – Issues, Data preprocessing – Data cleaning, Data transformation, Feature selection, Dimensionality reduction, Discretization and generating concept hierarchies-Mining frequent patterns- association-correlation. Decision Tree Induction - Bayesian Classification – Rule Based Classification –Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods.	
UNIT-IV:	10hrs
Clustering techniques – , Partitioning methods- k-means Hierarchical Methods - distance-based agglomerative and divisible clustering, Mining complex data objects, Spatial databases, temporal databases, Multimedia databases, Time series and Sequence data; Text Mining –Graph mining-web mining-Application and trends in data mining	
Text Books:

2. Ian Witten, Eibe Frank, Data Mining: Practical Machine Learning Tools and Techniques, third edition, Morgan Kaufmann, 2011.
3. George M Marakas, Modern Data Warehousing, Mining and Visualization, Prentice Hall, 2003

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Describe the requirement of a data warehouse and its components.
CO2	Explain the data warehouse life cycle.
CO3	Explain the concepts of data mining and data pre-processing.
CO4	Analyze different classification algorithms and apply the same to real life problems.
CO5	Apply different clustering algorithms for solving problems in various domains.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

CO5	1	2	2	3	3	3	3	2	2	2

Course Name:	WIRELESS SENSOR NETWORKS
Category:	Programme Elective Course
Prerequisite:	Basic Computer Network
Learning Objective:	The purpose of this course is to introduce students to Obtain a broad understanding about the network architecture of wireless sensor network.Understand all basic characteristics of wireless sensor networks and sensor nodes.The principles of data transmission, clustering algorithm and routing protocols.Design and development of new network architecture and MAC protocols.
Learning Outcome:	This course enables us to understand the concepts of wireless sensor network and its applications.

DSE Paper – MCA206B	
Wireless Sensor Networks	
UNIT-I:	10hrs
Introduction: Networked wireless sensor devices, Applications: Habitat Monitoring, Smart Transportation, Key design challenges. Network deployment: Structured versus randomized deployment, Network topology, Connectivity. Introduction to cloud system,Sensor Cloud Systems, Challenges in Sensor Cloud Systems.	
UNIT-II:	10hrs
Localization: issues & approaches, Coarse-grained & Fine-grained node localization, Network-wide localization. Wireless characteristics: Basics, Wireless link quality, Radio energy considerations, SINR capture model for interference.	
UNIT-III:	10hrs
Issues in designing MAC protocol for WSNs, Classification of MAC Protocols, Energy efficiency in MAC protocols, Asynchronous sleep techniques, Sleep-scheduled techniques. Classification of Energy Management Schemes Sleep-based topology control: Constructing topologies for connectivity, constructing topologies for coverage.	
UNIT-IV:	10hrs
Routing: Metric-based approaches, Routing with diversity, Multi-path routing, Lifetime-maximizing energy-aware routing techniques, Geographic routing. Data-centric routing, Data-gathering with compression, Querying, Data-centric storage and retrieval, The database perspective on sensor networks.	
Text Books:	
1. Wireless Sensor Networks: Technology, Protocols, and Applications: KazemSohraby, Daniel Minoli, TaiebZnati , Wiley Inter Science. 2. Networking Wireless Sensors: BhaskarKrismachari, Cambridge University Press	
Reference Books:	
1. Wireless Sensor Networks: Architectures and Protocols: Edgar H. Callaway, Jr. Auerbach Publications, CRC Press. 2. Wireless Sensor Networks: Edited by C.S Raghavendra, Krishna M, Sivalingam, TaiebZnati , Springer. 3. Distributed Sensor Networks: A Multiagent Perspective, Victor Lesser, Charles L. Ortiz, and	

MilindTambe , Kluwer Publications.

4.Wireless Sensor Networks: An Information Processing Approach- by Feng Zhao, Leonidas Guibas , Morgan Kaufmann Series in Networking 2004.

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Describe the overview of wireless sensor networks and enabling technologies for wireless sensor networks
CO2	Apply the design principles of WSN architectures and operating systems for simulating environment situations.
CO3	Apply various concepts for assignment of MAC addresses.
CO4	Select the appropriate infrastructure, topology, joint routing and information aggregation for wireless sensor networks
CO5	Analyse the sensor network platform and tools state-centric programming.

CO5	1	2	1	1	2		1	2	1	1

Course Name: **INTERNET OF THINGS**

Category: Programme Elective Course

Prerequisite: Knowledge of Computer Networks

Learning Objective:

- To learn the concepts behind IoT and different application areas where sensors can be effectively used to capture real-time data for monitoring and control functions.
- To understand various protocols that govern the functioning of an IoT System

Learning Outcome:

- Understand general concepts of Internet of Things (IoT)
- Recognize various devices, sensors and applications

DSE Paper –MCA 206C	
Internet of Things	
UNIT-I:	10hrs
Introduction to IoT, Basic requirements for building an IoT system, IoT reference framework, IoT network level – performance criteria. IoT devices: Sensors, Types of sensors and their functions: temperature, pressure, air pollution, proximity, infrared, moisture & humidity, flow, level, noise, and speed sensors. Characteristics of sensors. Use of RFID Actuators, Types of actuators and their functions: electrical, mechanical, and hydraulic actuators, controlling IoT devices	
UNIT-II:	10hrs
IoT requirements for networking protocols, device addressing, credential management, wireless spectrum, determinism, security and privacy, application interoperability, semantic interoperability. IoT Protocol Stack: layered view. Link layer: IEEE 802.15.4 technology, LoRaWAN end-to-end architecture, Time-Sensitive Networking Internet Layer: Routing Protocol for Low-Power and Lossy Networks.	
UNIT-III:	10hrs
Application Protocols Layer: Data Serialization Formats, Communication Paradigms: Request/Response Versus Publish/Subscribe, Blocking Versus Non-blocking, QoS: Resource Utilization, Data Timeliness, Data Availability, Data Delivery IoT Application Protocols: CoAP, XMPP, MQTT, AMQP, SIP, IEEE 1888, and DDS RTPS. Application Services Layer: ETSI M2M network architecture, oneM2M standards. IoT Services Platform: Functions and Requirements, IoT Platform Manager, Discovery, Communication Manager, Data Management, Management of IoT Devices, Configuration and Fault Management, Performance Management and measures	
UNIT-IV:	10hrs
IoT security and Privacy: challenges, requirements, IoT Three-Domain Architecture, Attacks and Countermeasures for each domain. Applications of IoT in areas like Smart home, Agriculture, Healthcare, Industry, Transportation, Retail, Oil and Gas, Energy etc. IoT Service Model: Anything as a Service, IoT Connected	

Ecosystems Models
Text Books:
1. Internet of Things from Hype To Reality: The Road to Digitization (2nd ed), Ammar Rayes and Samer Salam, Springer, 2019.

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Describe basic concepts of IoT, its architecture and system design.
CO2	Employ the communication mechanisms between sensors and systems using various protocols and network models.
CO3	Explain IoT with respect to machine to machine and design IoT systems with data synchronization and resource manipulation. Explore various application protocols.
CO4	Discuss and describe different security issues and challenges.
CO5	Identify real world applications of IoT in multidisciplinary domains.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

CO5	2	2	1	3	2	1	2		1	1

Course Name: **MOBILE COMPUTING**
Category: Programme Elective Course
Prerequisite: **Data communication and Computer Networks**
Learning Objective:

- Describe wireless and mobile communications systems and be able to choose an appropriate mobile system from a set of requirements.

DSE Paper-MCA206D	
Mobile Computing	
UNIT-I:	10hrs
Introduction to mobile computing, mobile computing architecture, mobile devices, mobile system networks: Cellular Network and frequency reuse, Channel Assignment, Handoff Strategies, Interferences and System Capacity, Improving coverage and capacity in Cellular Systems – Cell Splitting, Sectoring, Repeaters and Range Extension, Limitations of Mobile Computing.	
UNIT-II:	10hrs
Personal Communications Services (PCS): PCS Architecture, mobility management, Global System for Mobile Communication (GSM). System overview: GSM Architecture, Mobility management, Network signalling. General Packet Radio Services (GPRS): GPRS Architecture, GPRS Network Nodes	
UNIT-III:	10hrs
Mobile Network Layer: Mobile IP (Goals, assumptions, entities and terminology, IP packet delivery, agent advertisement and discovery, registration, tunnelling and encapsulation, optimizations), Dynamic Host Configuration Protocol (DHCP). Mobile Transport Layer: Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit/fast recovery, Transmission /time-out freezing, Selective retransmission, Transaction oriented TCP.	
UNIT-IV:	10hrs
Mobile Data Communication: WLANs (Wireless LANs), IEEE 802.11 standards. Mobile Satellite Communication Networks: Case studies of the IRIDIUM and GLOBALSTAR systems. Wireless Enterprise Networks: Introduction to Virtual Networks, VPN, Mobile Ad-hoc networks, 4G Technology, Long Term Evolution (LTE).	
Text Book:	
<ol style="list-style-type: none"> 1. R. Kamal, Mobile Computing, 1st Edition, Oxford University Press, 2006. 2. Mobile Computing Technology, Applications & Service Creation, A K Talukder & R RYavagal (TMH) 3. Wireless Communication, T. S Rappaport, Pearson

3. Third Generation Mobile Telecommunication Systems, by P. Stavronlakis, Springer Publishers	

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Explain the basic of Mobile Computing.
CO2	Infer the fundamentals of wireless communications.
CO3	Analyze security, energy efficiency, mobility, scalability, and their unique characteristics in wireless networks.
CO4	Demonstrate basic skills for cellular networks design.
CO5	Apply knowledge of TCP/IP extensions for mobile and wireless networking.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

Semester-III

Course Name:	INFORMATION SECURITY
Category:	Programme Core Course
Prerequisite:	Computer Network
Learning Objective:	<ul style="list-style-type: none"> • Explain the objectives of information security • Explain the importance and application of each of confidentiality, integrity, authentication and availability • Understand various cryptographic algorithms. • Understand the basic categories of threats to computers and networks • Describe public-key cryptosystem. • Describe the enhancements made to IPv4 by IPSec • Understand Intrusions and intrusion detection • Discuss the fundamental ideas of public-key cryptography. • Discuss about Web security and Firewalls.
Learning Outcome:	<ul style="list-style-type: none"> • Student will be able to understand basic cryptographic algorithms, message and web authentication and security issues. • Ability to identify information system requirements for both of them such as client and server. • Ability to understand the current legal issues towards information security.

Paper-MCA301	
Information Security	
UNIT-I:	10hrs
<p>Attacks on Computers and Computer Security: Introduction, The need for security, Security goals, Security attacks(Attack on Confidentiality,Integrity,Availability)Security Services and Mechanisms, Techniques(Cryptography,Steganography).</p> <p>Introduction to plain text and cipher text, encryption and decryption. substitution techniques, transposition techniques, symmetric and asymmetric key cryptography, steganography, possible types of cryptanalysis attacks.</p>	
UNIT-II:	10hrs
<p>Symmetric key Ciphers: Block Cipher principles & Algorithms(DES, AES, Blowfish), Differential and Linear Cryptanalysis, Block cipher modes of operation, Stream ciphers RC4, Location and placement of encryption function.</p> <p>Introduction to number theory-Prime numbers,Euler's Phi-Function,Fermat's and Euler's theorem, Chinese Remainder Theorem,Generating Primes(MersennePrime,Fermat Prime),Primality testing(Deterministic algorithms,Probabilistic algorithms)</p> <p>Asymmetric key Ciphers: Principles of public key cryptosystems, Algorithms(RSA, Diffie-Hellman), Key Distribution.</p>	
UNIT-III:	10hrs
Message Authentication Algorithms and Hash Functions: Message authentication	

(MDC,MAC)Nested MAC,HMAC,CMAC,Whirlpool. Hash functions: MD5 Message Digest algorithm,SHA-1. Digital signatures, Authentication Applications: Kerberos, X.509 Authentication Service, Public — Key Infrastructure, Biometric Authentication.
UNIT-IV: 10hrs
E-Mail Security: Pretty Good Privacy, S/MIME IP Security: IP Security overview, IP Security architecture, Authentication Header, Encapsulating security payload, Combining security associations, key management. Web Security: Web security considerations, Secure Socket Layer and Transport Layer Security, Secure electronic transaction. Intrusion Detection System(types, techniques). Intruders, Virus and Firewalls: Intruders, Intrusion detection, password management, Virus and related threats, Countermeasures, Firewall design principles, Types of firewalls.
Text Book:
1. B. A. Forouzan, D.Mukhopadhyay, Cryptography and Network Security , 2 nd Edition, McGraw Hill, 2007.
Reference Books:
1. A. Kahate, Network Security , 2 nd Edition, McGraw Hill, 2008. 2. W. Stalling, Cryptography and Network Security , 4 th Edition, Pearson Education, 2006.

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Analyze the working of various Symmetric and Asymmetric key cryptographic algorithms for information security purpose
CO2	Identify the basic categories of threats in a networks
CO3	Able to demonstrate the design and use of hash functions, digital signatures, and key distribution with a wide range of key types
CO4	Discuss about Web security and Firewalls
CO5	Discuss about Intrusion Detection system.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

Course Name: **COMPUTER ARCHITECTURE**

Category: Programme Core Course

Prerequisite: **Digital Logic**

Learning Objective:

- To study design of an elementary basic computer
- To have a better understanding of a hardwired and microprogrammed control unit.
- To introduce the concept of memory hierarchy and pipelining to speed-up the processor

Learning Outcome:

- After this course students understand in a better way to design and interconnection of various modules of a system, the I/O and memory organization in depth.

Paper-MCA302	
Computer Architecture	
UNIT-I:	10hrs
Register Transfer and Micro-operations: Register Transfer Language, Register transfer, Bus and memory transfer, Arithmetic, Logical and Shift Micro Operation, Arithmetic Logic Shift Unit	
Basic Computer Organization and Design: Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle & Register Reference Instructions, Memory Reference Instructions, Input-Output and Interrupt. Design of Basic Computer.	
UNIT-II:	10hrs
Basic Processing Unit: Some Fundamental Concepts: Register Transfers, Performing an Arithmetic or Logic Operation, Fetching a Word from Memory, Storing a word in Memory, Execution of Complete Instruction, Branch Instructions, Multiple Bus Organization	
Micro-Programmed Control: Control Memory, Address Sequencing: Conditional branching, Mapping of Instruction, Subroutine; Micro Program Example: Computer configuration, Microinstruction format, Symbolic Microinstruction, The fetch routine, Symbolic Microprogram, Binary Microinstruction; Design of Control Unit: Microprogram Sequencer.	
UNIT-III:	10hrs
Memory Organization: Memory Hierarchy, Associative Memory: Hardware Organisation, Match Logic, Read Operation, Write Operation; Cache Memory: Associative Mapping, Direct Mapping, Set Associative Mapping,	

Write into Cache Memory, Cache Initialization; Virtual Memory: Address Space and Memory Space, Address mapping Using Pages, Associative Memory Page Table, Page Replacement

UNIT-IV: **10hrs**

Pipeline and Vector Processing:

Parallel Processing, Pipelining: General Considerations; Arithmetic Pipeline, Instruction Pipeline: Four-segment Instruction Pipeline Example, Data Dependency, Handling of Branch Instructions; Vector Processing; Array Processors

Multiprocessors:

Characteristics of Multiprocessors, Interconnection structures, Interprocessor arbitration, Interprocessor communication and synchronization, Cache coherence

Text Books:

1. Computer Organization & Architecture-William Stallings,8th Edition (PHI)

Reference Books:

1. Computer Architecture and Organization- Rajiv Chopra (S. Chand)
2. Computer Organization- Carl Hamacher, Zvonko Vranesic, Safwat Zaky 5th Edition, McGraw-Hill Education India

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Analyze the designing process of combinational and sequential circuits.
CO2	Identify the addressing modes used in macro instructions.
CO3	Describe the memory organization with the virtual memory concept along with the mapping and replacement technique.
CO4	Describe the input / output organization technique with its implementation.
CO5	Identify the interrupt of the system and characteristics of types of systems.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	2	2	1	3	1		1	1	1	1
CO2	2	1	1	2	1		2	2	2	2
CO3	3	2	2	2	1		1	1	1	1
CO4	3	2	3	3	1		1	1	1	1
CO5	3	2	3	2	1		1	1	1	1

Course Name: **SOFTWARE ENGINEERING & OOAD**

Category: Programme Core Course

Prerequisite: Knowledge on programming and data structure

Learning Objective:

- To understand common cycle process life processes.
- To understand the basic concepts in Requirement engineering, software design, coding, testing and maintenance
- To learn about the role of project management including scheduling, planning, risk management etc.
- To have a basic knowledge about software quality, how to ensure good quality software.

Learning Outcome:

- After successful completion of the course the students will be able to demonstrate basic software engineering methods and practices, and their appropriate application.

Paper-MCA303	
Software Engineering & OOAD	
UNIT-I:	10hrs
Software and software engineering: Basic concepts about software and program, the nature of software, Evolution of Software Engineering, Stakeholders in software engineering, Software quality, Software engineering projects, Activities common to software projects, Basic concept on process and life cycle models.	
UNIT-II:	10hrs
Models: Waterfall, Prototype, Evolutionary, Incremental, Spiral, V-model, RAD. Requirement Analysis: System and software requirements, Types of software requirements, Functional and non-functional requirements, Domain requirements, User requirement Elicitation and analysis of requirements, Overview of requirement techniques, Viewpoints, Interviewing, Scenario, Requirement validation, Requirement specification, Software requirement Specification (SRS) Structure and contents, SRS format	
UNIT-III:	10hrs
Introduction to Object Oriented Technology: Development and OO Modeling History, Modeling Concepts, Object Oriented Analysis: Identifying Use-Cases, Complexity in Object Oriented Analysis, Business Process Modeling and Business Object Analysis, Use-Case Driven Object Oriented Analysis, Use-Case Model. Class Modeling: Object and class concepts, link and association, Generalization and Inheritance, Advanced class modeling- aggregation, Abstract class, constraints. State Modeling: Event, state, Transition and conditions, state diagram, state diagram behaviour, concurrency, Relation of Class and State models. Interaction Modeling: sequence models, activity diagrams	
UNIT-IV:	10hrs
Software Project Management: Overview of Project Management, Responsibilities of Project Manager, Project Planning, Metrics for Project Size Estimation, Factors Influencing Project Management, Project Estimation Techniques, COCOMO Model and its versions,	

Course Name:

WEB TECHNOLOGY

Category: ProgrammeCore Course

Prerequisite:

- Good understanding of object oriented programming
- Basic programming skills

Learning Objective:

- Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
- Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
- Learn the language of styling the web page using HTML and CSS.
- Acquire knowledge to develop valid and well-formed XML document.
- Learn techniques of responsive web application design.
- Develop basic programming skills using JavaScript and PHP.

Learning Outcome:

- Design and implement dynamic websites with good aesthetic sense of designing.
- Have a Good grounding of web application terminologies and web development tools.
- Develop multiplatform interactive and dynamic web applications.
- Outline the key components that facilitate the interoperability nature of web services.

Paper-MCA304	
Web Technology	
UNIT-I:	10hrs
Web Essentials: Clients, Servers, and Communication. The Internet-Basic Internet Protocols - The World Wide Web-HTTP request message-response message-Web Clients Web Servers-Case Study. Markup Languages: XHTML. An Introduction to HTML History-Versions-Basic XHTML Syntax and Semantics-Some Fundamental HTML Elements-Relative URLs-Lists-tables-Frames-Forms-XML Creating HTML Documents-Case Study.	
UNIT-II:	10hrs
Style Sheets: CSS-Introduction to Cascading Style Sheets-Features-Core Syntax-StyleSheets and HTML Style Rule Cascading and Inheritance-Text Properties-Box Model-Normal Flow Box Layout-Beyond the Normal Flow-Other Properties-Case Study. Client-Side Programming: The JavaScript Language-History and Versions Introduction to JavaScript in Perspective-Syntax-Variables and Data Types-Statements-Operators-Literals-Functions-Objects-Arrays-Built-in Objects-JavaScript Debuggers.	
UNIT-III:	10hrs
PHP: Introducing PHP, PHP Language Basics–Using variables, Understanding Data Types, Operators and Expressions, Constants. Decisions and Loops–Making Decisions, Doing Repetitive	

Tasks with Looping, Mixing Decisions and Looping with HTML. **Strings**—Creating and Accessing Strings, Searching Strings, Replacing Text with strings, Dealing with Upper and Lowercase, Formatting Strings. **Arrays**—Creating Arrays, Accessing Array Elements, Looping Through Arrays with for-each, Working with Multidimensional Arrays, Manipulating Arrays. **Functions**, writing your own Functions, Working with References, Writing Recursive Functions.

Objects—Introduction OOP Concepts, Creating Classes and Objects in PHP, Creating and using Properties, Working with Methods.

UNIT-IV:

10hrs

PHP MySQL: Handling HTML Forms with PHP—How HTML form works, Capturing Form Data with PHP, Dealing with Multi-Value Fields, Generating Web Forms with PHP, Storing PHP Variables in Forms, Creating File Upload Forms, Redirecting After a Form Submission. **Introducing Databases and SQL**—Deciding How to Store Data, Understanding Relational Databases, Setting Up MySQL, A Quick Play with MySQL, Connecting MySQL from PHP. **Retrieving Data from MySQL with PHP**—Setting Up the Book Club Database, Retrieving Data with SELECT, Creating a Member Record Viewer. Manipulating MySQL Data with PHP—Inserting, Updating, and Deleting Records.

Text Books:

1. M. Doyle, **Beginning PHP 5.3**, 1st Edition, John Wiley & Sons, 2011.
2. J. Duckett, **Beginning HTML, XHTML, CSS and JavaScript**, 1st Edition, John Wiley & Sons, 2011

Reference Book:

1. L. Welling, L. Thomson, **PHP and MySQL Web Development**, 1st Edition, Sams Publishing, 2003.

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Identify basic HTML elements, XML elements and develop static web-pages.
CO2	Describe different styles in web page design. Apply style sheets and java script to prepare elegant web-pages with client side validations.
CO3	Implement server side business logic into dynamic web pages using PHP.
CO4	Use PHP to design user interactive forms for data entry with proper validation.
CO5	Develop aesthetic web applications with database connectivity using PHP.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	3	1	1			1	1	1	1
CO2	2	3	2	2	1				1	1
CO3	2	3	1	2	1		1	1	2	2
CO4	2	3	2	3	2		1	1	2	2
CO5	2	3	2	3	2		1	1	1	2

Lab: Web Technology and Software Engineering

EXPERIMENTS ON WEB TECHNOLOGY:

1. Design a web page for your college containing a description of courses, departments, faculties using different HTML elements.
2. Customize the HTML page using CSS.
3. Create a login form which will check for username and password. If login successful then goto next form(Student registration form) that contains form with fields Name, Email, Mobile No ,Gender and a button .write a JavaScript code to validate data of above form.
4. Develop simple calculator for addition, subtraction, and multiplicationanddivisionoperation using JavaScript.
5. Design a web page to create your resume usecolor, textcolor, an Image, font etc. You may use CSS to format web page.
6. Create user Student registrationform (use textbox, checkbox, radiobutton, select box etc.)
7. Design an examination registration form using HTML. Store the required data in a database (create it using MySQL) using PHP and also display message regarding status of registration (Success or Unsuccess).
8. Create a database through PHP and MySQL, and create, delete and modify data on database.
9. Store the data from a HTML form designed for registering a webinar and using PHP and MySQL, store, and update the data. Display the database data in HTML form.
10. Create an application using HTML, PHP. Create login form using HTML and checkusername and password using PHP, if login successful it will go on next HTML page and if failure again goesback to login page

EXPERIMENTS ON SOFTWARE ENGINEERING:

Develop requirements specification for a given problem (The requirements specification Should include both functional and non-functional requirements. For a set of about 20 sample problems, see the questions section of Chap 6 of Software Engineering book of Rajib Mall)

- 2: Develop DFD Model (Level 0, Level 1 DFD and data dictionary) of the sample problem (Use of a CASE tool required)
- 3: Develop structured design for the DFD model developed
- 4: Develop UML Use case model for a problem (Use of a CASE tool any of Rational rose, Argo UML, or Visual Paradigm etc. is required)
- 5: Develop Sequence Diagrams.
- 6: Develop Class diagrams.
- 7: Develop code for the developed class model using Java.
- 8: Use testing tool such as Junit.
- 9: Use a configuration management tool.
- 10: Use any one project management tool such as Microsoft Project or Gantt Project, etc

Course Name: NETWORK AND INTERNET TECHNOLOGIES

Category: IDSE Course

Prerequisite: Basic knowledge of a computer system and Internet is required.

Learning Objective:

- study the fundamental concepts of computer networks.
- Introduce the fundamental concepts of Web Design.
- expose students to develop basic web applications.

Learning Outcome:

- describe the basics of computer networks topology.
- understand the basic concept of transmission media, LAN topology and network devices,
- develop web applications using web technologies

IDSE-Paper-MCA306A	
Network and Internet Technologies	
UNIT-I:	10hrs
Computer Networks: Introduction to computer network, datacommunication, components of data communication, data transmission mode, data communication measurement, LAN, MAN, WAN, wireless LAN, internet, intranet ,extranet. Network Models: Client/ server network and Peer-to-peer network, OSI, TCP/IP, layers and functionalities.	
UNIT-II:	10hrs
Transmission Media: Introduction, Guided Media: Twisted pair, Coaxial cable, Opticalfiber. Unguided media: Microwave, Radio frequency propagation,Satellite. LAN Topologies: Ring, bus, star, mesh and tree topologies. Network Devices: NIC, repeaters, hub, bridge, switch, gateway androuter. Internet Terms: Web page, Home page, website, internet browsers, URL, Hypertext, ISP, Web server, download and upload, online andoffline.	
UNIT-III:	10hrs
Introduction to Web Design: Introduction to hypertext markup language (html) Document type definition, creating web pages, lists, hyperlinks, tables, web forms, inserting images, frames, hosting options and domain name registration.	
UNIT-IV:	10hrs
Style Sheets: CSS-Introduction to Cascading Style Sheets-Features-Core Syntax-StyleSheets and HTML Style Rule Cascading and Inheritance-Text Properties-Box Model-Normal Flow Box Layout-Beyond the Normal Flow-Other Properties-Case Study. Client-Side Programming: The JavaScript Language-History and Versions Introduction to	

JavaScript in Perspective-Syntax-Variables and Data Types-Statements-Operators-Literals-Functions-Objects-Arrays-Built-in Objects-JavaScript Debuggers.

Text Book:

1. J. A. Ramalho, **Learn Advanced HTML 4.0 with DHTML**, BPB Publications,2007

Reference Books:

1. B. A. Forouzan, Data Communication and Networking , Tata McGrawHill, 2008.
2. D.R. Brooks, An Introduction to HTML and Javascript for Scientists and Engineers, Springer, 2007.
3. HTML A Beginner's Guide, Tata McGraw-Hill Education,2009.
4. J. A. Ramalho, Learn Advanced HTML 4.0 with DHTML, BPB Publications,2007

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Understand the fundamental concepts of Computer networks with architecture.
CO2	Basic Concept of various Network Devices
CO3	Understand the basic concept of transmission media, LAN topology.
CO4	Understand Fundamentals of Web Design
CO5	Develop Web Applications using Web Technologies

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	3	2	2	2		1			1
CO2	1	2	1			1		1	1	1
CO3	1	2	1			1		1	1	1

CO5	2	3	2	3	3	3	1		2	1

Course Name

FUNDAMENTALS OF COMPUTER

Category IDSE Course

Prerequisite: Basic mathematics

Learning Objective:

- To make students understand and learn the basics of computer.
- To make them familiar with the parts and functions of computer.

Learning Outcome:

Identify and describe the functionality of various parts of digital computer. Describe the working principle of Computer. Perform various binary arithmetic operations. Describe the use of different type of memory used in computer

IDSE-Paper-MCA306B	
Fundamentals of Computer	
UNIT-I:	10hrs
Computer Basics: Simple model of computer, Problem solving using computer (flowchart, program, working of a computer, hardware and software). Data Representation: Character representation, representation of integers and fractions, Decimal to binary conversion. Input / Output Units.	
UNIT-II:	10hrs
Memory System: Basic Concepts RAM, ROM, Speed, size and cost, Cache Memory concepts, Cache Memory mapping techniques, Virtual Memory concepts, Secondary Storage. Processor: Structure of instructions, Description of a processor, Machine language program, Algorithm to simulate the hypothetical computer.	
UNIT-III:	10hrs
Binary Arithmetic: Addition, subtraction, signed numbers, Two's complement representation of numbers, addition/subtraction of numbers in 2's complement notation, binary multiplication, binary division, floating point representation of numbers, arithmetic operation with normalized floating point numbers.	
UNIT-IV:	10hrs
Logic circuits: switching circuits, AND, OR, NOT operation, Boolean functions, canonical forms for Boolean function, logic circuits. Computer Architecture: Interconnection of Units, Processor to memory communication, I/O devices to processor communication, Bus architecture of personal computers; Introduction to Programming Language, Operating system..	
Text Book:	
1. V. Rajaraman, and N. Adabala, Fundamentals of computers , PHI, 2014. 2. A. Goel, Computer Fundamentals , Pearson Education, 2010.	
Reference Book:	
1. P. Aksoy, L. DeNardis, Introduction to Information Technology , Cengage Learning, 2006. 2. P. K. Sinha, P. Sinha, Fundamentals of Computers , BPB Publishers, 2007.	

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Describe the basic of computer.
CO2	Classify the architectural level of the system
CO3	Explain the memory and its related concepts of the system.
CO4	Evaluates the complements of the numbers both for positive and negative numbers.
CO5	Discuss the concepts of Programming languages and its basic classifications.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	1		1			1	1	1	1
CO2	1	1	2	2	1	1			1	1
CO3	1	1		1				1	1	1
CO4										
CO5	1	1	1	1	1	1			3	1

Course Name: INTRODUCTION TO PROGRAMMING USING PYTHON

Category: IDSE Course

Prerequisite: Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course. Prior experience with any other programming language will be beneficial.

Learning Objective:

- Introduce Python programming to students.
- Apply problem solving techniques to solve computational problems using python.
- Expose students to develop application for solving computational problems.

Learning Outcome::

- Able to install and set the python environment in their PC and execute python programs.
- Proficiently use functions and core data structure like list, dictionaries, tuple.
- Understand Python syntax, flow control, and functions to solve real life application.
- Develop application using Object Oriented Programming concepts of Python.

IDSE-Paper-MCA306C	
Introduction to Programming Using Python	
UNIT-I:	10hrs
Introduction: Installation, First Python Program: Interactive Mode Programming, Script Mode Programming; Identifiers, Reserved Words, Lines and Indentation, Multi-Line Statements, Quotation & Comments; Assigning Values to Variables, Multiple Assignment.	
UNIT-II:	10hrs
Standard Data Types: Numbers, Strings, Lists, Tuples, Dictionary; Data Type Conversion; Basic Operators: Arithmetic, Comparison, Assignment, Bitwise; Operators: Logical, Membership, Identity; Operators Precedence; Python Numbers & Mathematical functions Data Type Conversion: Basic Operators: Arithmetic, Comparison, Assignment, Bitwise; Basic Operators, Python Numbers & Mathematical functions; Python Strings.	
UNIT-III:	10hrs
Python statements and Loops: if, if-else, While, for loops, break, continue, pass, Python Function; Files I/O. Functions: Definition, call, positional and keyword parameter. Default parameters, variable number of arguments. Modules - import mechanisms. Functional programming - map, filter, reduce, max, min. lambda function - list comprehension	
UNIT-IV:	10hrs
Object Oriented Programming: classes and objects - Inheritance – Polymorphism overloading; Error handling & Exceptions - try, except and raise - exception propagation File Processing: reading and writing files.	

Text Book:
.1. Python Programming Fundamentals - A Beginner's Handbook, NischaykumarHegde
Reference Book:
1.Python: The Complete Reference by Martin C.Brown

	COURSE OUTCOMES: After completion of this course successfully, the students will be able to-
CO1	Operate the installation of the software and its operation.
CO2	Memorize the concepts of Python language.
CO3	Breakdown the problems and Model according to that.
CO4	Design the programs according the given problems.
CO5	Compare this language with other language with its benefits.

Mapping of COs to POs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1		1		2	3		1	2		
CO2		2	1	2	3		1	2	1	
CO3	2	2	1	2	3		1	2	1	
CO4	1	2	2	2	2		1	2		
CO5		2		1	3		1	2		1

Semester-IV

MCA401

Industrial Project Work / Internship

Students are expected to undertake a software development project (preferably a real-life project) and implement the same by following a software engineering approach.

Students will analyze a system, understand, design, write code, test, and implement the software system as an end-product.

Student has to work under the guidance of a supervisor

S/he has to submit a project report and give a presentation along with a viva voce.

MCA 402/403

Students are required to complete any **two** of the following MOOCs courses of minimum 8 weeks duration anytime during his/her entire two years of MCA from <https://swayam.gov.in>. aswellas <https://nptel.ac.in>.The course completion certificate of below said courses need to be submitted in the final year at the time of Project Viva.

1.An Introduction to Coding Theory	2.Big Data Computing
3.Cloud Computing	4.Computer Graphics
5.Data Science for Engineers	6.Google Cloud Computing Foundations
7.Image Signal Processing	8.Scalable Data Science
9.Applied Natural Language Processing	10.Introduction to Machine Learning
11.Peer to Peer Networks	12.Animations
13. Parallel Algorithms	14. Distributed Computing systems
15.Pattern Recognition	16.Real Time Systems

17. Microprocessors and Microcontroller	18. Computational Complexity Theory
19. Deep learning	20. Data Analytics with Python
21. Embedded System Design	22. Android app using Kotlin
23. Introduction to Haskell programming	24. Human-Computer Interaction
25. Arduino	26. Blockchain Architecture Design and Use cases
27. Introduction to Soft computing	28. Computer Vision
29. Digital image processing	30. Virtual Reality

Apart from the above courses if any student wishes to do any course from <https://swayam.gov.in> as well as <https://nptel.ac.in> (but it should not be in their course curriculum of 1st, 2nd and 3rd Semesters) they are allowed to do so with a prior approval of Coordinator MCA.
